Abstract of CN1142080

The present invention relates to a kind of computer hardware document fixation method which is used to prevent computer virus or human factors to destroy the computer documents. It classifies the computer documents into two kinds. Names of those documents ready to be fixed are transferred to the front of catalogue district. The chain list formed from the distribution cluster numbers of documents ready to be fixed is transferred to the front of fast automatic transfer (FAT) table. The pattern operation of hardware can be saved. So that the destroy of fixed documents by virus can be prevented.
